

Samantha

Vero Friis

Summary

Finance and business student with a genuine interest in how companies work and why some don't. I spend time outside of university doing my own equity research, building small automation tools, and getting unreasonably invested in optimizing things that probably didn't need optimizing. I enjoy finding inefficiencies, whether in a balance sheet or a workflow, and figuring out a cleaner way through them. Looking for an analyst or finance-adjacent role where I can contribute while I study.

Independent Equity Research

I analyse publicly listed companies using SEC filings, earnings reports, and whatever data I can get my hands on. I look at profitability, liquidity, and long-term sustainability. When information is sparse or inconsistent, I cross-validate across sources until the picture gets clearer. There is something satisfying about turning a messy 10-K into a clean set of conclusions.

Technical Tools & Automation

I build small tools to cut out repetitive work, mostly in Python for data processing and validation, and Go for lightweight backend services where speed matters. I have a tendency to keep refining things past the point of necessity, which means what starts as a quick script usually ends up well-documented and slightly over-engineered. Practical, but built with care.

Education History

2025–Today

Bachelor of Economics & Business Administration (HA)
Aalborg University, In progress (Expected 2028)

2020–2023

HTX - Technical Upper Secondary Education
Viden Gymnasier
Study focus: Mathematics A, Biology B
Study project: Mathematics & Technology
